SUMMARY

Innovative AI Engineer with nearly **3 years** of experience at **State Street**, specializing in **Python backend development** and **LLM-based systems**. Skilled in **RAG**, **multi-agent orchestration**, scalable **AI infrastructure**, and enterprise-grade **AI integrations**. Experienced in building end-to-end **RAG pipelines**, high-performance **LLM APIs**, and automated knowledge retrieval systems. Proven track record of taking **PoCs to Production**, onboarding **50+ teams** with **99.9% uptime**, and delivering reliable production-ready AI solutions.

WORK EXPERIENCE

State Street, *Senior Associate - Agentic AI Engineer* (*January* 2024 - *Present*)

- **RAGAS (RAG as a Service)** - Developed an enterprise-grade **RAG platform** with centralized ingestion/retrieval APIs, advanced **parsing**, **semantic chunking**, and connectors for **SharePoint, Jira, Confluence, ServiceNow, Azure Blob**, etc. Implemented **SelfQuery, MultiQuery, Ensemble, Compression, and Agentic Retrievers**, reducing **LLM inference latency from 9s to 4s**, boosting **throughput by 35%**, and improving **retrieval resiliency/consistency by 2–3x** while onboarding **30+ internal teams**.
- **SSGenAI** - Built a self-service enterprise copilot platform supporting **DomainQA, RAG, and Questionnaire** applications with **multi-model orchestration**, **RBAC (Azure AD)**, **guardrails, PII masking** and **99.9% platform uptime**. Integrated scalable retrieval workflows through **RAGAS**, enabling adoption across **20+ internal teams**.
- **Data Exploration Agent (DEA)** - Built a multi-agent AI orchestration platform for automated schema mapping and data analysis using **RAG**, **SQL/Python-based EDA**, and **Validation agents.** Enabled SMEs to accelerate source-to-target mapping through automated schema understanding, query execution, reasoning, and rule-based validation, achieving **80%+ mapping accuracy** while reducing traditionally manual **6–8 month workflows to 2–3 weeks**.
- **Enterprise AI Observability Platform** - Built an **enterprise-wide centralized AI/LLM observability platform** with 12+ **FastAPI microservices** on **Kubernetes**, supporting **OpenTelemetry-based tracing**, **Databricks + ClickHouse analytics**, custom **LLM auto-instrumentation SDK**, **KPI/evaluation** services, **alerting**, and **real-time telemetry pipelines** via **Azure EventHub** and **Arize AI**. Achieved near real-time **dashboarding and distributed tracing with only 1–2 minute latency** across observability pipelines.

SKILLS

- **Languages & Backend:** Python, FastAPI, REST APIs, Pydantic, SQLAlchemy
- **ML/Deep Learning:** PyTorch, Transformers, HuggingFace, Fine-Tuning, RAGAS, DeepEval, LLM Benchmarking
- **AI/LLM Frameworks:** LangChain, LangGraph, DeepAgents, LangSmith
- **RAG & LLM Ops:** RAG pipelines, Retrieval Optimization, Hybrid Search, Reranking, Chunking Strategies, LLM Evaluation, Context Management, Observability, MCP's, Agent Skills, Guardrails & Jailbreak Detection
- **Databases:**
  1. **Relational & Analytical** - SQLite3, PostgreSQL, DuckDB, ClickHouseDB
  2. **Vector** - PostgreSQL, ChromaDB
  3. **Caching** - Redis, DiskCache
  4. **Graph:** Neo4j
  5. **Big Data & Analytics:** Databricks Delta Tables
- **Cloud & DevOps:** Microsoft Azure, Azure AI Foundry, CI/CD (Azure DevOps) Docker, Kubernetes, Nginx, Helm
- **Concurrency & Performance:** Multithreading, Multiprocessing, AsyncIO, Parallel Processing
- **Tools:** VS Code, Postman, GitHub, Jupyter Notebook, Docker Desktop, Locust
- **AI Tools:** GitHub Copilot, Claude, ChatGPT

EDUCATION

Gitam University | CGPA: 9.19/10 2020 – 2024 | Visakhapatnam, India

Bachelor's in Computer Science and Engineering (*Data Science Specialization*)
